Differential Privacy

Tetsuya Sato Yasuhiko Minamide

February 6, 2026

Abstract

This entry contains formalization of differential privacy in a general setting, based on the seminal textbook of Dwork and Roth [3] and the papers of statistical divergence for differential privacy [2, 5].

This entry includes the following formalization:

- Measurable space of lists and measurability of list operations,
- Laplace distribution,
- The statisatical divergence for differential privacy,
- Differential privacy and its basic properties,
- Randomized Response,
- Laplace mechanism,
- The report noisy max mechanism.

1 Measurable space of finite lists

This entry introduces a measurable space of finite lists over a measurable space. The construction is inspired from Hirata's idea on list quasi-Borel spaces [Hirata et al., ITP 2023]. First, we construct countable coproduct space of product of n spaces. Then, we trasnsfer it to list space via bijections.

1.1 miscellaneous lemmas

lemma *measurable-pair-assoc*[*measurable*]:
shows $(\lambda((a,\ b),\ x).\ (a,\ b,\ x)) \in (A \bigotimes_M B) \bigotimes_M C \to_M A \bigotimes_M B \bigotimes_M C$
⟨*proof*⟩

lemma *measurable-pair-assoc'*[*measurable*]:

shows $(\lambda((a,\ b),\ x,\ l).\ (a,\ b,\ x,\ l)) \in (A \bigotimes_M B) \bigotimes_M C \bigotimes_M D \rightarrow_M A \bigotimes_M B \bigotimes_M C \bigotimes_M D$
⟨*proof*⟩

1.2 construction of list space

fun *pair-to-list* :: $(nat \times (nat \Rightarrow 'a)) \Rightarrow 'a\ list$ **where**
Zero: *pair-to-list* $(0,\text{-}) = []$
| *Suc*: *pair-to-list* $(Suc\ n,f) = (f\ 0) \#$ *pair-to-list* $(n,\ \lambda\ n.\ f\ (Suc\ n))$

fun *list-to-pair* :: $'a\ list \Rightarrow (nat \times (nat \Rightarrow 'a))$ **where**
Nil: *list-to-pair* $[] = (0,\lambda\text{-}.undefined)$
| *Cons*: *list-to-pair* $(x\#xs) = (Suc\ (fst(\text{list-to-pair}\ xs)),\ \lambda n.\ if\ n = 0\ then\ x\ else\ (snd(\text{list-to-pair}\ xs))(n - 1))$

definition *listM* :: $'a\ measure \Rightarrow 'a\ list\ measure$ **where**
listM M =
initial-source $(lists\ (space\ M))\ \{(\text{list-to-pair},\ \Pi_M\ n{\in}UNIV.\ \Pi_S\ i{\in}\{..{<}n\}.\ M)\}$

lemma *space-listM*:
shows *space* $(listM\ M) = (lists\ (space\ M))$
⟨*proof*⟩

lemma *lists-listM*[*measurable*]:
shows *lists* $(space\ M) \in sets\ (listM\ M)$
⟨*proof*⟩

lemma *comp-list-to-list*:
shows *pair-to-list* $(\text{list-to-pair}\ xs) = xs$
⟨*proof*⟩

lemma *list-to-pair-function*:
shows *list-to-pair* $\in lists\ (space\ M) \rightarrow space\ (\Pi_M\ n{\in}UNIV.\ \Pi_S\ i{\in}\{..{<}n\}.\ M)$
⟨*proof*⟩

lemma *list-to-pair-measurable*:
shows *list-to-pair* $\in (listM\ M) \rightarrow_M (\Pi_M\ n{\in}UNIV.\ \Pi_S\ i{\in}\{..{<}n\}.\ M)$
⟨*proof*⟩

lemma *comp-pair-to-pair*:
shows $(n,f) \in (SIGMA\ n{:}UNIV.\ \{..{<}n\} \rightarrow_E (space\ M)) \Longrightarrow (\text{list-to-pair}\ (\text{pair-to-list}\ (n,f)) = (n,f))$
⟨*proof*⟩

lemma *pair-to-list-function*:
shows *pair-to-list* $\in space\ (\Pi_M\ n{\in}UNIV.\ \Pi_S\ i{\in}\{..{<}n\}.\ M) \rightarrow lists$

(*space M*)
⟨*proof*⟩

proposition *pair-to-list-measurable*:

shows *Nil* $\in$ *space* (*listM* M)
⟨*proof*⟩

lemma *measurable-Cons'*[*measurable*]:
shows $x \in$ *space* $M \Longrightarrow$ *Cons* $x \in$ (*listM* M) $\rightarrow_M$ (*listM* M)
⟨*proof*⟩

1.3.2 Measurability of $\lambda p.\ [p]$, the unit of list monad.

lemma *measurable-unit-ListM*[*measurable*]:
shows $(\lambda p.\ [p]) \in M \rightarrow_M$ *listM* M
⟨*proof*⟩

1.3.3 Measurability of *rec-list*

Since the notion of measurable functions does not support higher-order functions in general, the following theorems for measurability of*rec-list* are restricted.

lemma *measurable-rec-list-func2'*:
fixes $T :: 'a \Rightarrow ('b \Rightarrow 'd)$
and $F :: 'a \Rightarrow 'c \Rightarrow 'c\ list \Rightarrow ('b \Rightarrow 'd) \Rightarrow ('b \Rightarrow 'd)$
assumes $(\lambda(a,b).\ T\ a\ b) \in K \bigotimes_M L \rightarrow_M N$
and $\bigwedge i\ g.\ (\lambda\ ((a,\ q),\ l).\ g\ a\ q\ l) \in (K \bigotimes_M L) \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$
$\Longrightarrow (\lambda((a,b),x,l).\ (F\ a\ x\ ((pair\text{-}to\text{-}list\ o\ (coProj\ i))\ l))\ (\lambda q.\ (g\ a\ q\ l))\ b) \in (K \bigotimes_M L) \bigotimes_M M \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$

shows $(\lambda((a,b),xs).\ (rec\text{-}list\ (T\ a)\ (F\ a))\ xs\ b) \in (K \bigotimes_M L) \bigotimes_M (listM\ M) \rightarrow_M N$
⟨*proof*⟩

lemma *measurable-rec-list-func2*:
fixes $T :: 'a \Rightarrow ('b \Rightarrow 'd)$
and $F :: 'a \Rightarrow 'c \Rightarrow 'c\ list \Rightarrow ('b \Rightarrow 'd) \Rightarrow ('b \Rightarrow 'd)$
assumes $(\lambda(a,b).\ T\ a\ b) \in K \bigotimes_M L \rightarrow_M N$
and $\bigwedge i\ g.\ (\lambda\ (a,\ q,\ l).\ g\ a\ q\ l) \in K \bigotimes_M L \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$
$\Longrightarrow (\lambda(a,b,x,l).\ (F\ a\ x\ ((pair\text{-}to\text{-}list\ o\ (coProj\ i))\ l))\ (\lambda q.\ (g\ a\ q\ l))\ b) \in K \bigotimes_M L \bigotimes_M M \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$

shows $(\lambda(a,b,xs).\ (rec\text{-}list\ (T\ a)\ (F\ a))\ xs\ b) \in K \bigotimes_M L \bigotimes_M (listM\ M) \rightarrow_M N$
⟨*proof*⟩

lemma *measurable-rec-list'-func*:
fixes $T :: ('c \Rightarrow 'd)$
and $F :: 'b \Rightarrow 'b\ list \Rightarrow ('c \Rightarrow 'd) \Rightarrow ('c \Rightarrow 'd)$
assumes $T \in K \rightarrow_M N$
and $\bigwedge i\ g.\ g \in K \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$
$\Longrightarrow (\lambda p.\ (F\ (fst\ (snd\ p))\ (pair\text{-}to\text{-}list\ (coProj\ i(snd\ (snd\ (p)))))\ (\lambda q.\ (g\ (q,snd\ (snd\ (p))))))\ (fst\ p)) \in K \bigotimes_M M \bigotimes_M (\Pi_S\ i \in \{..<i\}.\ M) \rightarrow_M N$

shows $(\lambda p.\ (rec\text{-}list\ T\ F)\ (snd\ p)\ (fst\ p)) \in K \bigotimes_M (listM\ M) \rightarrow_M N$
⟨*proof*⟩

1.3.4 Measurability of *case-list*

lemma *measurable-case-list*[*measurable*(*raw*)]:
assumes [*measurable*]:(λ*p*. (*F* (*fst p*) (*snd p*))) $\in$ *M* $\bigotimes_M$ (*listM M*) $\rightarrow_M$ *N*
and *T* $\in$ *space N*
shows *case-list T F* $\in$ (*listM M*) $\rightarrow_M$ *N*
⟨*proof*⟩

lemma *measurable-case-list2*[*measurable*]:
assumes [*measurable*]:(λ(*x*,*b*,*bl*). *g x b bl*) $\in$ *N* $\bigotimes_M$ *L* $\bigotimes_M$ (*listM L*) $\rightarrow_M$ *M*
and [*measurable*]:*a* $\in$ *N* $\rightarrow_M$ *M*

shows $(\lambda(x,xs).\ \textit{case-list}\ (a\ x)\ (g\ x)\ xs) \in N \bigotimes_M (\textit{listM}\ L) \to_M M$
⟨*proof*⟩

lemma *measurable-case-list′*:
assumes $(\lambda(x,b,bl).\ g\ x\ b\ bl) \in N \bigotimes_M L \bigotimes_M (\textit{listM}\ L) \to_M M$
and $a \in N \to_M M$
and $l \in N \to_M \textit{listM}\ L$
shows $(\lambda x.\ \textit{case-list}\ (a\ x)\ (g\ x)\ (l\ x)) \in N \to_M M$
⟨*proof*⟩

1.3.5 Measurability of *foldr*

lemma *measurable-foldr*:
assumes $(\lambda\ (x,y).\ F\ x\ y) \in (N \bigotimes_M M \to_M N)$
shows $(\lambda\ (T,xs).\ \textit{foldr}\ (\lambda\ x\ y.\ F\ y\ x)\ xs\ T) \in N \bigotimes_M (\textit{listM}\ M) \to_M N$
⟨*proof*⟩

1.3.6 Measurability of (@)

lemma *measurable-append*[*measurable*]:
shows $(\lambda\ (xs,ys).\ xs\ @\ ys) \in (\textit{listM}\ M) \bigotimes_M (\textit{listM}\ M) \to_M (\textit{listM}\ M)$
⟨*proof*⟩

1.3.7 Measurability of *rev*

lemma *measurable-rev*[*measurable*]:
shows $\textit{rev} \in (\textit{listM}\ M) \to_M (\textit{listM}\ M)$
⟨*proof*⟩

1.3.8 Measurability of *concat*, that is, the bind of the list monad

lemma *measurable-concat*[*measurable*]:
shows $\textit{concat} \in \textit{listM}\ (\textit{listM}\ M) \to_M (\textit{listM}\ M)$
⟨*proof*⟩

1.3.9 Measurability of *map*, the functor part of the list monad

lemma *measurable-map*[*measurable*]:
assumes [*measurable*]: $f \in M \to_M N$
shows $(\textit{map}\ f) \in (\textit{listM}\ M) \to_M (\textit{listM}\ N)$
⟨*proof*⟩

1.3.10 Measurability of *length*

lemma *measurable-length*[*measurable*]:
shows $\textit{length} \in \textit{listM}\ M \to_M \textit{count-space}\ (\textit{UNIV} :: \textit{nat}\ \textit{set})$

⟨*proof*⟩

lemma *sets-listM-length*[*measurable*]:
shows {*xs*. *xs* ∈ *space* (*listM M*) ∧ *length xs* = *n*} ∈ *sets* (*listM M*)
⟨*proof*⟩

1.3.11 Measurability of *foldl*

lemma *measurable-foldl* [*measurable*]:
assumes [*measurable*]:(λ(*x*,*y*). *F y x*) ∈ (*M* ⨂$_M$ *N* →$_M$ *N*)
shows (λ (*T*,*xs*). *foldl F T xs*) ∈ *N* ⨂$_M$ (*listM M*) →$_M$ *N*
⟨*proof*⟩

1.3.12 Measurability of *fold*

lemma *measurable-fold* [*measurable*]:
assumes [*measurable*]: (λ(*x*,*y*). *F x y*) ∈ (*M* ⨂$_M$ *N*→$_M$ *N*)
shows (λ (*T*,*xs*). *fold F xs T*) ∈ *N* ⨂$_M$ (*listM M*) →$_M$ *N*
⟨*proof*⟩

1.3.13 Measurability of *drop*

lemma *measurable-drop*[*measurable*]:
shows *drop n* ∈ *listM M* →$_M$ *listM M*
⟨*proof*⟩

lemma *measurable-drop'*[*measurable*]:
shows (λ (*n*,*xs*). *drop n xs*) ∈ *count-space* (*UNIV* :: *nat set*) ⨂$_M$ *listM M* →$_M$ *listM M*
⟨*proof*⟩

1.3.14 Measurability of *take*

lemma *measurable-take*[*measurable*]:
shows *take n* ∈ *listM M* →$_M$ *listM M*
⟨*proof*⟩

lemma *measurable-take'*[*measurable*]:
shows (λ (*n*,*xs*). *take n xs*) ∈ *count-space* (*UNIV* :: *nat set*) ⨂$_M$ *listM M* →$_M$ *listM M*
⟨*proof*⟩

1.3.15 Measurability of (!) plus a default value

Since the @term undefined is harmful to prove measurability, we introduce the total function version of (!) that returns a fixed default value when the nth element is not found.

primrec *nth-total* :: *'a* ⇒ *'a list* ⇒ *nat* ⇒ *'a* **where**
nth-total d [] *n* = *d* |

nth-total d (x # xs) n = (case n of 0 ⇒ x | Suc k ⇒ nth-total d xs k)

value*nth-total (15 :: nat) [] (0 :: nat) :: nat*
value*nth-total (15 :: nat) [1] (0 :: nat) :: nat*
value*nth-total (15 :: nat) [1,2,3] (0 :: nat) :: nat*
value*nth-total (15 :: nat) [1,2,3] (1 :: nat) :: nat*
value*nth-total (15 :: nat) [1,2,3] (2 :: nat) :: nat*
value*nth-total (15 :: nat) [1,2,3] (3 :: nat) :: nat*

value*nth [1] (0 :: nat) :: nat*
value*nth [1,2,3] (0 :: nat) :: nat*
value*nth [1,2,3] (1 :: nat) :: nat*
value*nth [1,2,3] (2 :: nat) :: nat*

The total version *nth-total* is the same as (!) if the nth element exists and otherwise it returns the default value.

lemma *cong-nth-total-nth*:
shows *((n :: nat) < length xs ∧ 0 < length xs) ⟹ nth-total d xs n = nth xs n*
⟨*proof*⟩

4 Comparable Pairs of Probability Measures

To compare two probability measures M and N on the same space, we introduce their Radon-Nikodym derivatives (i.e. density functions) with respect to the sum measure M + N. We could consider various base measures, but we choose the sum measure,

because it is finite; it is easy to check the absolute continuity M, N « M + N; the Radon-Nikodym derivatives dM and dN are bounded and are essentially partition of unity(i.e. dM + dN = 1 a.e.).

4.1 Sum of two measures

definition *sum-measure* :: *'a measure* ⇒ *'a measure* ⇒ *'a measure* **where**

5 Divergence for Differential Privacy

First, we introduce the divergence for differential privacy.

definition *DP-divergence* :: *'a measure* ⇒ *'a measure* ⇒ *real* ⇒ *ereal*
where
DP-divergence M N ε = Sup {*ereal*(*measure M A* − (*exp ε*) ∗ *measure N A*) | *A*::*'a set. A* ∈ (*sets M*)}

lemma *DP-divergence-SUP*:
shows *DP-divergence M N ε* = (⨆ (*A*::*'a set*) ∈ (*sets M*). *ereal*(*measure M A* − (*exp ε*) ∗ *measure N A*))
⟨*proof*⟩

5.1 Basic Properties

5.1.1 Non-negativity

lemma *DP-divergence-nonnegativity*:
shows *0* ≤ *DP-divergence M N ε*
⟨*proof*⟩

5.1.2 Graded predicate

lemma *DP-divergence-forall*:
shows (∀ *A* ∈ (*sets M*). (*measure M A* − (*exp ε*) ∗ *measure N A* ≤ (*δ* :: *real*)))
⟷ *DP-divergence M N ε* ≤ (*δ* :: *real*)
⟨*proof*⟩

lemma *DP-divergence-leE*:
assumes *DP-divergence M N ε* ≤ (*δ* :: *real*)
shows *measure M A* ≤ (*exp ε*) ∗ *measure N A* + (*δ* :: *real*)

⟨*proof*⟩

lemma *DP-divergence-leI*:
assumes $\bigwedge A.\ A \in (sets\ M) \Longrightarrow measure\ M\ A \leq (exp\ \varepsilon) * measure\ N\ A + (\delta :: real)$
shows $DP\text{-}divergence\ M\ N\ \varepsilon \leq (\delta :: real)$
⟨*proof*⟩

5.1.3 $(0,0)$-DP means the equality of distributions

lemma *prob-measure-eqI-le*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and *le*:$\forall\ A \in sets\ M.\ emeasure\ M\ A \leq emeasure\ N\ A$
shows $M = N$
⟨*proof*⟩

lemma *DP-divergence-zero*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and $DP0$:$DP\text{-}divergence\ M\ N\ (0::real) \leq (0::real)$
shows $M = N$
⟨*proof*⟩

5.1.4 Conversion from pointwise DP [4]

lemma *DP-divergence-pointwise*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and C: $C \in sets\ M$
and $\forall A \in sets\ M.\ A \subseteq C \longrightarrow measure\ M\ A \leq exp\ \varepsilon * measure\ N\ A$
and $1 - \delta \leq measure\ M\ C$
shows $DP\text{-}divergence\ M\ N\ (\varepsilon::real) \leq \delta$
⟨*proof*⟩

5.1.5 (Reverse-) Monotonicity for ε

lemma *DP-divergence-monotonicity*:
assumes $\varepsilon 1 \leq \varepsilon 2$
shows $DP\text{-}divergence\ M\ N\ \varepsilon 2 \leq DP\text{-}divergence\ M\ N\ \varepsilon 1$
⟨*proof*⟩

corollary *DP-divergence-monotonicity'*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and $\varepsilon 1 \leq \varepsilon 2$ **and** $\delta 1 \leq \delta 2$
shows $DP\text{-}divergence\ M\ N\ \varepsilon 1 \leq \delta 1 \Longrightarrow DP\text{-}divergence\ M\ N\ \varepsilon 2 \leq \delta 2$
⟨*proof*⟩

⟨*proof*⟩

corollary *DP-divergence-reflexivity′*:
assumes *0 ≤ ε*
shows *DP-divergence M M ε = 0*
⟨*proof*⟩

5.1.7 Transitivity

lemma *DP-divergence-transitivity*:
assumes *DP1*: *DP-divergence M1 M2 ε1 ≤ 0*
and *DP2*: *DP-divergence M2 M3 ε2 ≤ 0*
shows *DP-divergence M1 M3 (ε1+ε2) ≤ 0*
⟨*proof*⟩

5.1.8 Composability

proposition *DP-divergence-composability*:
assumes *M*: *M ∈ space (prob-algebra L)*
and *N*: *N ∈ space (prob-algebra L)*
and *f*: *f ∈ L →M prob-algebra K*
and *g*: *g ∈ L →M prob-algebra K*
and *div1*: *DP-divergence M N ε1 ≤ (δ1 :: real)*
and *div2*: *∀ x ∈ (space L). DP-divergence (f x) (g x) ε2 ≤ (δ2 :: real)*
and *0 ≤ ε1* **and** *0 ≤ ε2*
shows *DP-divergence (M ⤜ f) (N ⤜ g) (ε1 + ε2) ≤ δ1 + δ2*
⟨*proof*⟩

5.1.9 Post-processing inequality

corollary *DP-divergence-postprocessing*:
assumes *M*: *M ∈ space (prob-algebra L)*
and *N*: *N ∈ space (prob-algebra L)*
and *f*: *f ∈ L →M (prob-algebra K)*
and *div1*: *DP-divergence M N ε1 ≤ (δ1 :: real)*
and *0≤ ε1*
shows *DP-divergence (bind M f) (bind N f) ε1 ≤ δ1*
⟨*proof*⟩

5.1.10 Law for the strength of the Giry monad

lemma *DP-divergence-strength*:
assumes *M ∈ space (prob-algebra L)*
and *N ∈ space (prob-algebra L)*
and *DP-divergence M N ε1 ≤ (δ1 :: real)*

and $0 \leq \varepsilon 1$
and $x{:}x \in space\ K$
shows *DP-divergence* $((return\ K\ x) \bigotimes_M M)\ ((return\ K\ x) \bigotimes_M N)\ \varepsilon 1 \leq \delta 1$
⟨*proof*⟩

5.1.11 Additivity: law for the double-strength of the Giry monad

lemma *DP-divergence-additivity*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and $M2$: $M2 \in space\ (prob\text{-}algebra\ K)$
and $N2$: $N2 \in space\ (prob\text{-}algebra\ K)$
and $div1$: $DP\text{-}divergence\ M\ N\ \varepsilon 1 \leq (\delta 1 :: real)$
and $div2'$: $DP\text{-}divergence\ M2\ N2\ \varepsilon 2 \leq (\delta 2 :: real)$
and $0 \leq \varepsilon 1$ **and** $0 \leq \varepsilon 2$
shows $DP\text{-}divergence\ (M \bigotimes_M M2)\ (N \bigotimes_M N2)\ (\varepsilon 1 + \varepsilon 2) \leq \delta 1 + \delta 2$
⟨*proof*⟩

5.2 Hypotehsis testing interpretation

5.2.1 Privacy region

definition $DP\text{-}region\text{-}one\text{-}side :: real \Rightarrow real \Rightarrow (real \times real)\ set$ **where**
$DP\text{-}region\text{-}one\text{-}side\ \varepsilon\ \delta = \{(x{::}real, y{::}real).\ (x - exp(\varepsilon) * y \leq \delta) \wedge 0 \leq x \wedge x \leq 1 \wedge 0 \leq y \wedge y \leq 1\}$

lemma *DP-divergence-region*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
shows $(\forall\ A \in (sets\ M).\ ((measure\ M\ A, measure\ N\ A) \in DP\text{-}region\text{-}one\text{-}side\ \varepsilon\ \delta)) \longleftrightarrow DP\text{-}divergence\ M\ N\ \varepsilon \leq (\delta :: real)$
⟨*proof*⟩

5.2.2 2-generatedness of *DP-divergence* [1]

lemma *DP-divergence-2-generated-deterministic*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$
and $0 \leq \varepsilon$
shows $DP\text{-}divergence\ M\ N\ \varepsilon = (\bigsqcup f \in L \to_M (count\text{-}space\ (UNIV :: bool\ set)).\ DP\text{-}divergence\ (distr\ M\ (count\text{-}space\ UNIV)\ f)\ (distr\ N\ (count\text{-}space\ UNIV)\ f)\ \varepsilon)$
⟨*proof*⟩

lemma *DP-divergence-2-generated*:
assumes M: $M \in space\ (prob\text{-}algebra\ L)$
and N: $N \in space\ (prob\text{-}algebra\ L)$

assumes $0 \leq \varepsilon$
shows *DP-divergence M N* $\varepsilon = (\bigsqcup f \in L \rightarrow_M$ (*prob-algebra* (*count-space* (*UNIV* :: *bool set*))). *DP-divergence* ($M \gg= f$) ($N \gg= f$) ε)
⟨*proof*⟩

5.3 real version of *DP-divergence*

5.3.1 finiteness

definition *DP-divergence-real* :: *'a measure* ⇒ *'a measure* ⇒ *real* ⇒ *real* **where**
DP-divergence-real M N ε = *Sup* {(*measure M A* − (*exp* ε) ∗ *measure N A*) | *A*::*'a set*. *A* ∈ (*sets M*)}

lemma *DP-divergence-real-SUP*:
shows *DP-divergence-real M N* ε = ($\bigsqcup$ (*A*::*'a set*) ∈ (*sets M*). (*measure M A* − (*exp* ε) ∗ *measure N A*))
⟨*proof*⟩

lemma *DP-divergence-real-leI*:
assumes $\bigwedge$ *A*. *A* ∈ (*sets M*) ⟹ *measure M A* ≤ (*exp* ε) ∗ *measure N A* + (δ :: *real*)
shows *DP-divergence-real M N* $\varepsilon \leq$ (δ :: *real*)
⟨*proof*⟩

5.3.2 real version of *DP-divergence*

If M and N are finite then *DP-divergence* and the following version *DP-divergence-real* are the same. However, if M and N are not finite, *DP-divergence-real M N* ε is not well defined. Hence, the latter needs extra assumptions for the finiteness of measures M and N. For example the following lemmas need a kind of finiteness of$M$ and N.

lemma *DP-divergence-is-real*:
assumes *M*: *M* ∈ *space* (*prob-algebra L*)
and *N*: *N* ∈ *space* (*prob-algebra L*)
shows *DP-divergence M N* ε = *DP-divergence-real M N* ε
⟨*proof*⟩

corollary *DP-divergence-real-forall*:
assumes *M*: *M* ∈ *space* (*prob-algebra L*)
and *N*: *N* ∈ *space* (*prob-algebra L*)
shows (∀ *A* ∈ (*sets M*). (*measure M A* − (*exp* ε) ∗ *measure N A* ≤ (δ :: *real*))) ⟷ *DP-divergence-real M N* $\varepsilon \leq$ (δ :: *real*)
⟨*proof*⟩

corollary *DP-divergence-real-inequality1*:
assumes *M*: *M* ∈ *space* (*prob-algebra L*)
and *N*: *N* ∈ *space* (*prob-algebra L*)

and $A \in (sets\ M)$ **and** *DP-divergence-real* $M\ N\ \varepsilon \leq (\delta :: real)$
shows $measure\ M\ A \leq (exp\ \varepsilon) * measure\ N\ A + (\delta :: real)$
⟨*proof*⟩

8 Formalization of Differential privacy

AFDP in this section means the textbook "The Algorithmic Foundations of Differential Privacy"written by Cynthia Dwork and Aaron Roth.

8.1 Predicate of Differential privacy

The inequality for DP (cf. [Def 2.4, AFDP]) definition *DP-inequality*:: *'a measure ⇒ 'a measure ⇒ real ⇒ real ⇒ bool***where**
DP-inequality M N ε δ ≡ (∀ A ∈ sets M. measure M A ≤ (exp ε) ∗ measure N A + δ)

The divergence for DP (cf. [Barthe & Olmedo, ICALP 2013]) **proposition** *DP-inequality-cong-DP-divergence*:
shows *DP-inequality M N ε δ ⟷ DP-divergence M N ε ≤ δ*
⟨*proof*⟩

corollary *DP-inequality-zero*:
assumes *M ∈ space (prob-algebra L)*
and *N ∈ space (prob-algebra L)*
and *DP-inequality M N 0 0*
shows *M = N*
⟨*proof*⟩

Definition of the standard differential privacy with adjacency, and its basic properties We first we abstract the domain of database and the adjacency relations. later we instantiate them according to the textbook.

definition *differential-privacy* :: *('a ⇒ 'b measure) ⇒ ('a rel) ⇒ real ⇒ real ⇒ bool* **where**
differential-privacy M adj ε δ ≡ ∀(d1,d2)∈adj. DP-inequality (M d1) (M d2) ε δ ∧ DP-inequality (M d2) (M d1) ε δ

lemma *differential-privacy-adj-sym*:
assumes *sym adj*
shows *differential-privacy M adj ε δ ⟷ (∀ (d1,d2) ∈ adj. DP-inequality (M d1) (M d2) ε δ)*
⟨*proof*⟩

lemma *differential-privacy-symmetrize*:
assumes *differential-privacy M adj ε δ*
shows *differential-privacy M (adj ∪ adj⁻¹) ε δ*
⟨*proof*⟩

lemma *differential-privacy-restrict*:
assumes *differential-privacy M adj ε δ*
and *adj' ⊆ adj*
shows *differential-privacy M adj' ε δ*
⟨*proof*⟩

Lemmas for group privacy (cf. [Theorem 2.2, AFDP])
lemma *pure-differential-privacy-comp*:
assumes *adj1 ⊆ (space X) × (space X)*
and *adj2 ⊆ (space X) × (space X)*
and *differential-privacy M adj1 ε1 0*
and *differential-privacy M adj2 ε2 0*
and *M:M ∈ X →M (prob-algebra R)*
shows *differential-privacy M (adj1 O adj2) (ε1 + ε2) 0*

⟨*proof*⟩

lemma *adj-trans-k*:
assumes $adj \subseteq A \times A$
and $0 < k$
shows $(adj \frown k) \subseteq A \times A$
⟨*proof*⟩

lemma *pure-differential-privacy-trans-k*:
assumes $adj \subseteq (space\ X) \times (space\ X)$
and *differential-privacy M adj* ε *0*
and *M*[*measurable*]:$M \in X \to_M (prob\text{-}algebra\ R)$
shows *differential-privacy M* $(adj \frown k)$ $(k * \varepsilon)$ *0*
⟨*proof*⟩

The relaxation of parameters (obvious in the pencil and paper manner). **lemma** *DP-inequality-relax*:
assumes *1*: $\varepsilon \leq \varepsilon'$ **and** *2*: $\delta \leq \delta'$
and *DP*: *DP-inequality M N* ε δ
shows *DP-inequality M N* ε' δ'
⟨*proof*⟩

proposition *differential-privacy-relax*:
assumes *DP*:*differential-privacy M adj* ε δ
and *1*: $\varepsilon \leq \varepsilon'$**and** *2*: $\delta \leq \delta'$
shows *differential-privacy M adj* ε' δ'
⟨*proof*⟩

Stability for post-processing (cf. [Prop 2.1, AFDP])
proposition *differential-privacy-postprocessing*:
assumes $\varepsilon \geq 0$
and *differential-privacy M adj* ε δ
and *M*: $M \in X \to_M (prob\text{-}algebra\ R)$
and *f*: $f \in R \to_M (prob\text{-}algebra\ R')$
and $adj \subseteq (space\ X) \times (space\ X)$
shows *differential-privacy* $(\lambda x.\ do\{y \leftarrow M\ x;\ f\ y\})$ *adj* ε δ
⟨*proof*⟩

corollary *differential-privacy-postprocessing-deterministic*:
assumes $\varepsilon \geq 0$
and *differential-privacy M adj* ε δ
and *M*[*measurable*]: $M \in X \to_M (prob\text{-}algebra\ R)$
and *f*[*measurable*]: $f \in R \to_M R'$
and $adj \subseteq (space\ X) \times (space\ X)$
shows *differential-privacy* $(\lambda x.\ do\{y \leftarrow M\ x;\ return\ R'\ (f\ y)\ \}\ )$ *adj* ε δ
⟨*proof*⟩

To handle the sensitivity, we prepare the conversions of adjacency

relations by pre-processing.

lemma *differential-privacy-preprocessing*:
assumes $\varepsilon \geq 0$
and *differential-privacy M adj* ε δ
and *f*: $f \in X' \rightarrow_M X$
and *ftr*: $\forall (x,y) \in adj'.\ (f\ x,\ f\ y) \in adj$
and $adj \subseteq (space\ X) \times (space\ X)$
and $adj' \subseteq (space\ X') \times (space\ X')$
shows *differential-privacy* $(M\ o\ f)$ adj' ε δ
⟨*proof*⟩

"Adaptive"composition (cf. [Theorem B.1, AFDP]) proposition *differential-privacy-composition-adaptive*:
assumes $\varepsilon \geq 0$
and $\varepsilon' \geq 0$
and *M*: $M \in X \rightarrow_M (prob\text{-}algebra\ Y)$
and *DPM*: *differential-privacy M adj* ε δ
and *N*: $N \in (X \bigotimes_M Y) \rightarrow_M (prob\text{-}algebra\ Z)$
and *DPN*: $\forall\ y \in space\ Y.$ *differential-privacy* $(\lambda\ x.\ N\ (x,y))$ *adj* ε' δ'
and $adj \subseteq (space\ X) \times (space\ X)$
shows *differential-privacy* $(\lambda x.\ do\{y \leftarrow M\ x;\ N\ (x,\ y)\})$ *adj* $(\varepsilon + \varepsilon')$ $(\delta + \delta')$
⟨*proof*⟩

"Sequential"composition [Theorem 3.14, AFDP, generalized] proposition *differential-privacy-composition-pair*:
assumes $\varepsilon \geq 0$
and $\varepsilon' \geq 0$
and *DPM*: *differential-privacy M adj* ε δ
and *M*[*measurable*]: $M \in X \rightarrow_M (prob\text{-}algebra\ Y)$
and *DPN*: *differential-privacy N adj* ε' δ'
and *N*[*measurable*]: $N \in X \rightarrow_M (prob\text{-}algebra\ Z)$
and $adj \subseteq (space\ X) \times (space\ X)$
shows *differential-privacy* $(\lambda x.\ do\{y \leftarrow M\ x;\ z \leftarrow N\ x;\ return\ (Y \bigotimes_M Z)\ (y,z)\}\ )$ *adj* $(\varepsilon + \varepsilon')$ $(\delta + \delta')$
⟨*proof*⟩

return (*count-space UNIV*) (*argmax-list y*)
}

Naive evaluation of differential privacy of *RNM-counting*
The naive proof is as follows: We first show that the counting query has the sensitivity m. *RNM-counting* adds the Laplace noise with scale $1 / \varepsilon$ to each element given by *counting-query*. Thanks to the postprocessing inequality, the final process *argmax-list* does not change the differential privacy. Therefore the differential privacy of *RNM-counting* is $m * \varepsilon$
