# Foundation of geometry in planes, and some complements : Excluding the parallel axioms

Fumiya Iwama

February 6, 2026

**Abstract**

"Foundations of Geometry" is a mathematical book written by Hilbert in 1899. This entry is a complete formalization of "Incidence" (excluding cubic axioms), "Order" and "Congruence" (excluding point sequences) of the axioms constructed in this book. In addition, the theorem of the problem about the part that is treated implicitly and is not clearly stated in it is being carried out in parallel.

## Contents

**1 Incidence** **1**

**2 Order** **4**

**3 Congruence** **11**

## 1 Incidence

D.Hilbert made a rigorous reconstruction of Euclidean geometry in Chapter 1 of [1]. There, five types of axioms are listed and 32 theorems are proved. In Hilbert's axiom system, basic concepts such as points and lines are treated as undefined terms, and only their relationships are defined by axioms. In addition, the continuity axiom stipulates that the Euclidean plane is essentially equivalent to the real plane R2, ensuring that the axiom system is categorical.

Implement each axiom and definition and prove the theorem (Coupling axioms related to space geometry axiom 4 to 8 are excluded).

# 3 Congruence

Of the equivalence relations for angles, only the transitive law is not included in the axiom, but is mentioned by the theorem. However, in the proofs before that, there are some scenes where it is regarded as congruence by the congruence relation with the same angle. Therefore, we add a weak transitive law that "when two angles are congruent, the same angle as one

is congruent with the other". Also, the uniqueness of the large and small relationship between the two angles and the transitive relation of three or more those have not been proved. Therefore, each proof regarding these is added to this section. Furthermore, regarding Theorem 23, the proof is omitted because the "large and small relationship of line segments", which is treated as a premise, is undefined. As a result, the proof process of Theorem 24 is different from the existing one.
