

# Minimal, Maximal, Least, and Greatest Elements w.r.t. Restricted Ordering

Martin Desharnais

October 30, 2024

## Abstract

This entry provides small, reusable, theories that specify the concepts of minimal, maximal, least, and greatest elements in sets, final sets, and final multisets. The concepts are uniformly specified as predicates parametrized by a binary relation. The binary relation is only required to be an ordering on the elements of the concrete collection considered. This is useful when working with a partial ordering, but some assumption or invariant proves that the ordering is total on all elements of the considered set.

## 1 Definitions

When a binary relation hold for two values, i.e.,  $R x y$ , we say that  $x$  reaches  $y$  and, conversely, that  $y$  is reachable by  $x$ .

**definition** *non-reachable-wrt* **where**  
 $\text{non-reachable-wrt } R \ X \ x \longleftrightarrow x \in X \wedge (\forall y \in X - \{x\}. \neg (R \ y \ x))$

**definition** *non-reaching-wrt* **where**  
 $\text{non-reaching-wrt } R \ X \ x \longleftrightarrow x \in X \wedge (\forall y \in X - \{x\}. \neg (R \ x \ y))$

**definition** *reaching-all-wrt* **where**  
 $\text{reaching-all-wrt } R \ X \ x \longleftrightarrow x \in X \wedge (\forall y \in X - \{x\}. R \ x \ y)$

**definition** *reachable-by-all-wrt* **where**  
 $\text{reachable-by-all-wrt } R \ X \ x \longleftrightarrow x \in X \wedge (\forall y \in X - \{x\}. R \ y \ x)$

## 2 Conversions

 $\langle proof \rangle$

**lemma** *ex-reachable-by-all-wrt*:  
  *transp-on A R  $\Rightarrow$  totalp-on A R  $\Rightarrow$  finite A  $\Rightarrow$  A  $\neq \{\}$   $\Rightarrow$   $\exists g. \text{reachable-by-all-wrt } R A g$*

$\langle proof \rangle$

**lemma** *not-ex-greatest-element-doubleton-if*:  
assumes  $x \neq y$  and  $\neg R x y$  and  $\neg R y x$   
**shows**  $\nexists g. \text{reachable-by-all-wrt } R \{x, y\} g$   
 $\langle proof \rangle$

## 4 Uniqueness

**lemma** *Uniq-non-reachable-wrt*:  
 $\text{totalp-on } X R \implies \exists_{\leq 1} x. \text{non-reachable-wrt } R X x$   
 $\langle proof \rangle$

**lemma** *Uniq-non-reaching-wrt*:  
 $\text{totalp-on } X R \implies \exists_{\leq 1} x. \text{non-reaching-wrt } R X x$   
 $\langle proof \rangle$

**lemma** *Uniq-reaching-all-wrt*:  
 $\text{asymp-on } X R \implies \exists_{\leq 1} x. \text{reaching-all-wrt } R X x$   
 $\langle proof \rangle$

**lemma** *Uniq-reachable-by-all-wrt*:  
 $\text{asymp-on } X R \implies \exists_{\leq 1} x. \text{reachable-by-all-wrt } R X x$   
 $\langle proof \rangle$

## 5 Existence of unique element

**lemma** *ex1-reaching-all-wrt*:  
 $\text{transp-on } X R \implies \text{asymp-on } X R \implies \text{totalp-on } X R \implies \text{finite } X \implies X \neq \{\}$   
 $\implies \exists !x. \text{reaching-all-wrt } R X x$   
 $\langle proof \rangle$

**lemma** *ex1-reachable-by-all-wrt*:  
 $\text{transp-on } X R \implies \text{asymp-on } X R \implies \text{totalp-on } X R \implies \text{finite } X \implies X \neq \{\}$   
 $\implies \exists !x. \text{reachable-by-all-wrt } R X x$   
 $\langle proof \rangle$

## 6 Transformations

**lemma** *non-reachable-wrt-insert-wrtI*:  
**assumes**  
trans:  $\text{transp-on } (\text{insert } y X) R$  and  
asym:  $\text{asymp-on } (\text{insert } y X) R$  and  
 $R y x$  and  
 $x\text{-non-reachable: } \text{non-reachable-wrt } R X x$   
**shows**  $\text{non-reachable-wrt } R (\text{insert } y X) y$

## 7 Minimal and maximal elements

If the binary relation is a strict partial order, then non-reachability corresponds to minimality and non-reaching correspond to maximality.

```

definition is-minimal-in-set-wrt :: ('a ⇒ 'a ⇒ bool) ⇒ 'a set ⇒ 'a ⇒ bool where
    transp-on X R ⇒⇒ asymp-on X R ⇒⇒ is-minimal-in-set-wrt R X = non-reachable-wrt
    R X

```

```

definition is-maximal-in-set-wrt :: ('a ⇒ 'a ⇒ bool) ⇒ 'a set ⇒ 'a ⇒ bool where
    transp-on X R ⇒⇒ asymp-on X R ⇒⇒ is-maximal-in-set-wrt R X = non-reaching-wrt
    R X

```

```

context
    fixes X R
assumes
    trans: transp-on X R and
    asym: asymp-on X R
begin

```

### 7.1 Conversions

```

lemma is-minimal-in-set-wrt-iff:
    is-minimal-in-set-wrt R X x ↔ x ∈ X ∧ ( ∀ y ∈ X. y ≠ x → ¬ R y x)
    ⟨proof⟩

```

```

lemma is-maximal-in-set-wrt-iff:
    is-maximal-in-set-wrt R X x ↔ x ∈ X ∧ ( ∀ y ∈ X. y ≠ x → ¬ R x y)
    ⟨proof⟩

```

### 7.2 Existence

```

lemma ex-minimal-in-set-wrt:
    finite X ⇒⇒ X ≠ {} ⇒⇒ ∃ x. is-minimal-in-set-wrt R X x
    ⟨proof⟩

```

```
